

Reducing Single Use Plastic

For over a decade HellermannTyton has been removing plastic from its packaging and is now free from polybags in many of its ranges. We are working to remove them from all products where possible.

This reduction in plastic packaging not only has a positive impact on the environment but provides additional benefits including reduced installation times from simply reducing the time it takes to remove the products from their packaging.

Our corrugated cardboard packaging is made from up to 70% recycled materials and is 100% recyclable. They are also FSC Certified which means they are made with materials from well-managed forests and/or recycled sources.

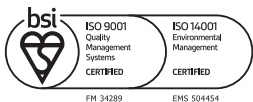

Greener Company

We take our environmental responsibilities seriously and are continuously striving to reduce the impact of our business on the environment. We consider the environmental implications of our products at an early stage in the design and development process to ensure that their environmental impact is minimised throughout their lifecycle from manufacture, through use and ultimately on disposal.

By virtue of our manufacturing location in Northampton, we believe our products have an inherently lower carbon footprint than many of our competitors who ship products into the UK from overseas. As well as the environmental benefits, our UK base gives us the ability to support our customers and respond quickly to their demands in a competitive market.

As a result of HellermannTyton operating greener, it means the installer and end-user are also greener.

Case Study

SKY – SKY Ocean Rescue, Pass on Plastic campaign have worked with HellermannTyton in stamping out single use plastic. All SKY deliveries of copper patch leads, fibre patch leads and POD boxes will be supplied WITHOUT polybags and now in recyclable cardboard boxes.
