

Fibre Optic cable connectors and panels now available from stock

As part of HellermannTyton Data's on-going product enhancement process we are pleased to now advise that we have increased our fibre optic range called "FibreBand". We will now be able to offer from stock an extensive range of bulk cables; which can be cut to length, patch leads, pig tails and patch panels. The aim of this introduction is to offer HellermannTyton products throughout your structured cabling network.

As part of the process, we have evaluated the parts most commonly in use and these have been used to create our new stock profile, which will be held at Northampton. For additional information please contact your local sales manager or HellermannTyton sales office.

Cable

We are offering; from stock; a wide range of cables both tide buffered and loose tube in various core densities in OM1, OM2 and OM3 standards, which can be cut to length at no additional charge

General specifications

- Black sheath branded with HellermannTyton
- Low Smoke Zero Halogen (LSZH) construction
- No charge of cut lengths
- Non stocked items on a short lead time.

Connectivity

In addition to the range of HellermannTyton fibre cable, will also be offering a range of interconnects to allow direct connection or through spliced connectors. The stock range is designed to reflect the products seen in use on a regular basis and includes patch panels, pig tails, connectors, adaptors and patch leads.

The panels will be loaded in our factory with a minimal lead time, thus ensuring you have total flexibility is designing your system.
