

## iD CoolPort Bus Manager

The CoolPort Bus Manager is used to distribute the communications bus to and from all iD Active patch panels and the respective Closet Controller.

For very compact communication cabinets the CoolPort Bus Manager may be located anywhere inside the Rack.

Produced in the HellermannTyton UK production facility under exacting ISO9000-2000 quality standards.

### Features and Benefits

- **Super compact design**
- **Connectivity for up to 2 iD Active panels**
- **Clear indication**
- **Simple connectivity (shielded Cat5e cords)**
- **Standard shielded Cat5e RJ45 jacks**
- **Locate anywhere in the Rack**
- **Manage bus communication cords**
- **LED for power indication**

### Technical Description

Connections are all standard shielded RJ45's. Two connections allow the Bus In and Bus Out connections and up to 2 patch panel connections.

All Bus cords must be kept to the shortest possible length and are distinguished by the red PVC boot.

The CoolPort Bus Manager also features the ability to inject an external power source to extend the communications bus length. The integrated LED indicates whether the power is local (Red) or remote (Green).

Please read the supporting documentation for bus length guide lines and power permutations.
