Built In Technology For Your New Home

The Benefits

Building technology into your new home makes sense both now and for the future.

The advance of network ready consumer appliances, digital storage and multi-media servers will change the way we access Information and Entertainment. The Home Network Sciences system means your house is networked ready to distribute these high speed data services.

The system can also offer many benefits for today's technology with Satellite, Video, TV and Audio sent to all the rooms where you need them.

The data networking system allows you to access the Internet from any room with the knowledge that the guaranteed Bandwidth and Security of a wired system can be complemented with the mobility of wireless network devices. This combined with telephone points distributed around the property gives you the flexibility to use a room for work or leisure.

Easy To Use

The Home Network Sciences system makes all this technology available in an easy to use package with a comprehensive user guide to help you maximise the potential of the system and get up and running straight away.

Choosing Your System

Ask your site sales representative about the system options available for your new home.

More information may be found on www.homenetworksciences.com

TV & Video Distribution • CCTV & Security • Telephones • Multi Room Audio • Home Networks • Broadband

Home Network Sciences a Smarter Way to Live...

A smarter home is a place for everyone to live, work and play. Home Networks Sciences makes your home smarter. The system gives you multi-room technology today and is ready for the digital services of the future.

Whatever your lifestyle the Home Network Sciences home has something for you.

TV and Video Distribution

Terrestrial, Cable and Satellite channels can be viewed in every room. You can also distribute your own video sources. It's like having a DVD player in every room.

Telephones

The telephone distribution system gives you sockets for telephones, fax machines and modems where you need them. Whether you want a home office in the spare room, or to just use a laptop in the kitchen, the system is flexible enough to cope.

Audio

With Home Network Sciences, Multi-Room Audio is an affordable luxury. You can listen to the radio in the shower, CDs in the kitchen and have HI-FI quality movies in the bedroom. An infra-red passing system gives you complete control.

Data Networking

Create your own Home Network. Your computers can exchange information and share printers. You can play networked games between rooms and even with the neighbours over the Internet. Broadband delivery is an important factor to consider both now and in the future.

Security

The HNS CCTV system lets you watch over your property day and night, see who's at the door from the comfort of your armchair, keep an eye on the kids playing in the garden or monitor the baby in the nursery.

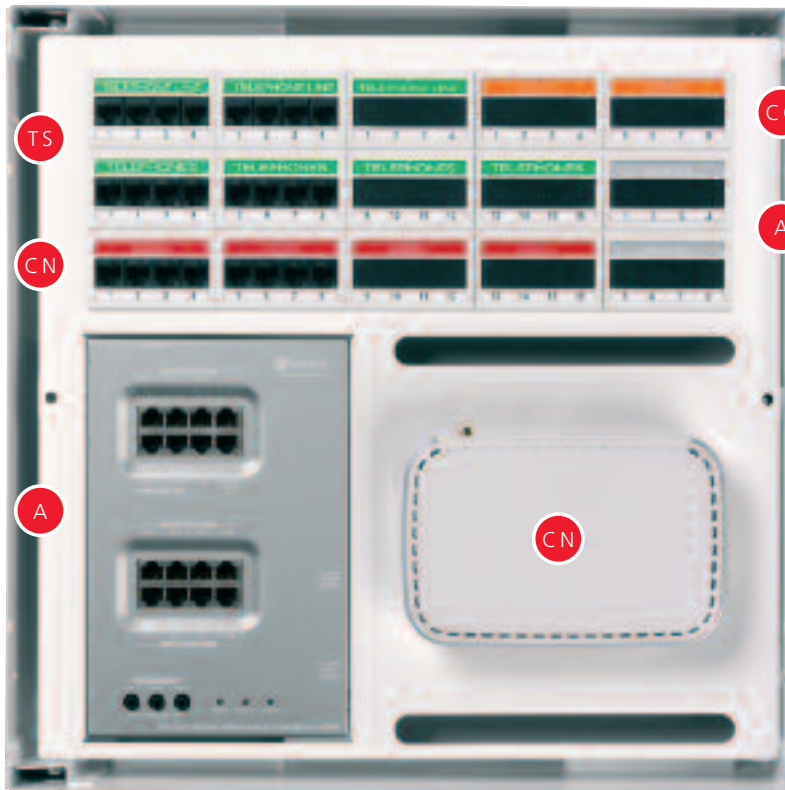

Not all services are fitted as standard in every property. Please ask you site sales representative for exact specification and upgrade options.

TS Telephone System

- Connect multiple telephone lines to extensions located throughout the property.

CN Computer Network

- Create a local area network and use it to share Printers and Files.
- Play Networked Games.
- Connect 4 PCs to the Internet with an optional ADSL Router (ADSL Line required).

A Audio

- High quality stereo sound in up to 6 rooms plus an additional 2 sub-zones per room.
- Infra-red remote control of volume, bass and treble as well as most source equipment such as CD and DVD players.
- COOLPORT input module allows sources to be located anywhere in property.
- Scalable chassis based solution uses Cat5e cables.
- Local input source available for each room.

CC CCTV

- The UHF modulator converts video and audio signals into a modulated UHF signal for use with standard TVs and VCRs via the distribution amplifier.
- View the pictures on any TV set around the property.
- High resolution cameras with wide viewing angle.
- 4 camera input.

TV Television

- Satellite, Terrestrial TV, CCTV, DAB and FM Radio can be distributed to 8 or 15 Rooms.
- Infra-Red passing option allows remote control of source equipment from any room.
