

CFNIR Fibre Optic Splice Tray

Compact IR SE

Application/Product Description

The Compact Integrated Routing (IR) single element tray is manufactured from ABS and finished to a high specification to eliminate the risk of snagging or microbends. All retaining tabs on the tray have radius edges and rounded corners where fibre may pass.

The overall dimensions of the tray are 150 x 134 x 7mm.

The single element tray accepts a wide range of splice protector holders which are positioned at the front of the tray for ease of measurement and installation. The maximum splice capacity of the tray is based on 24 double stacked 3A splice protectors upto 60mm long.

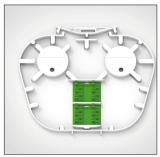

The Compact IR single element tray is suitable for use in the CFNIR closures.
