

CCPXXL - Customer Connection Point XXL

Fibre Optic External Enclosure LC and SC Adaptors

Application/Product Description

The Customer Connection Point XXL is used as an external Building Entry Point (BEP) to provide a fibre termination and a network test point outside of the customer location.

The CCP XXL has high (IP68) sealing performance and a compact design and can be housed in a small subterranean access chamber (e.g.: 'TobyBox300') whilst protecting the fibre connections from water or dirt contamination.

The closure has 2 entry points which are fitted with compression seals suitable for managing 5mm duct allowing for a Blown Fibre Unit to be blown directly into the closure.

The closure is IP68/IK08 rated and is available with or without a gortex breather membrane to prevent the build of internal moisture within the closure.

The enclosure is supplied pre-loaded with a single LC Duplex or SC Simplex fibre adaptor. The internal fibre management features ensure that a 30mm minimum bend radius is maintained throughout and provides fibre storage for a maximum of 25m of a Blown Fibre Unit (BFU).

The fully removable snap-on lid enables quick clear access to the internal fibre for ease of customer connection.

The enclosure has provision in the lid for a moulded customer logo. The standard colour is black with other options available on request.

Closed External View.

Internal view with 1 x LC/APC DX adaptor.

Internal view with 1 x SC/APC SX adaptor.

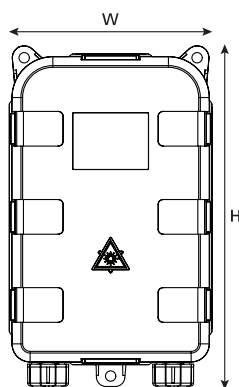

Features and Benefits:

- Maximum 2 Customer Connections (LC Duplex)
- Entry/Exit Port fitted with a compression seal
- Pre-loaded with adaptor
- Positive fibre management (30mm minimum bend radius)
- Maximum 25m BFU fibre storage capacity
- Gortex membrane to prevent moisture condensation (optional)
- Fully detachable snap-on lid
