

Hellapon Medium Splice Tray

Zone Distribution Box (side view)

The Hellapon Medium (Style C) Fibre Optic Splice Tray from HellermannTyton improves the capacity and functionality of the Hellapon tray while ensuring backward compatibility with existing FRBU closures already installed.

The current Style A and B trays are primarily used in the FRBU range of closures and support up to a maximum 16 x 3A splice protectors using the moulded fins whereas the re-designed version accommodates up to 24 x 3A splice protectors, increasing the capacity of both the tray and the closure. The Hellapon Style C tray also accommodates ANT splice protector holders.

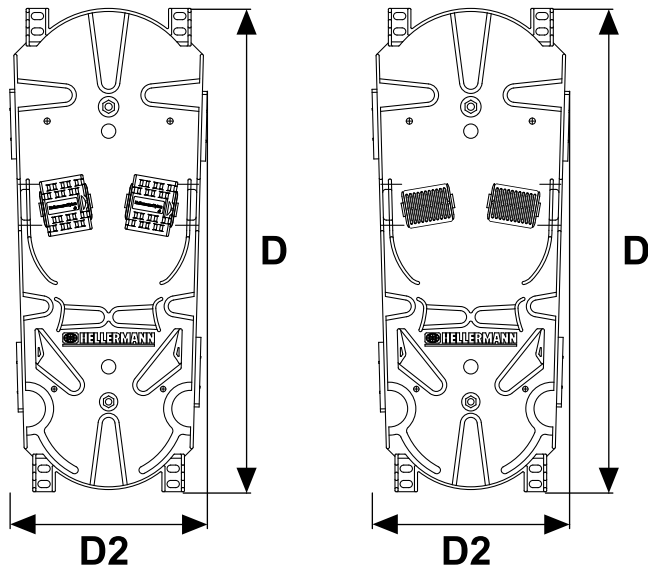

The increased capacity available with the re-designed tray allows the FRBU closure to support up to 144 spliced fibre connections using 24 x 3A protectors per tray, double stacked in the splice protector holder.

Features and Benefits

- Maximum splice capacity of 24 x 3A or ANT/Crimp splice protectors
- Better positioned splice inserts, allowing more room for routing the fibre on the tray.
- Achieve up to 144 fibres in FRBU Splice Closure
- Style C tray fits in existing closures for any retro installation
- Supplied in packs individually
