

Patching Frame

Fibre Routing

Cable Management Arm

The 2 post patching frame and vertical management solution from HellermannTyton provides high quality cable management and equipment access.

The open frame design and large capacity cable management makes this ideal for installation in telecommunications rooms and high capacity patching areas within data centres.

The central frame is a 2 post 19 inch wide 45U high floor standing unit made of 2mm steel which is powder coated black. Its wide foot plate ensures good stability once installed and the uprights are double folded for additional rigidity. For hardware and patch panel mounting, the frame uses cage nuts, also available from HellermannTyton. The frame includes six earthing points to support shielded system installations.

The vertical cable management is also 45U and available in two widths (300mm & 150mm) to suit the capacity and positioning of the frames. The front half is supplied with a removable dual hinge front door and finger bar to manage patch leads for copper (Category 5e, Category 6 and Category 6A) and all types of fibre.

The rear section of the vertical cable management is designed for backbone/trunk cabling and is fitted with three hinged retainers offering further cable management. The central divider has multiple pass through/access points and retaining points for managing and securing the cables.

The patching frame accommodates the full range of patch panels from HellermannTyton including angled panels, shielded panels, loaded panels, and Pre-terminated RapidNet panels including the Distribution Chassis.

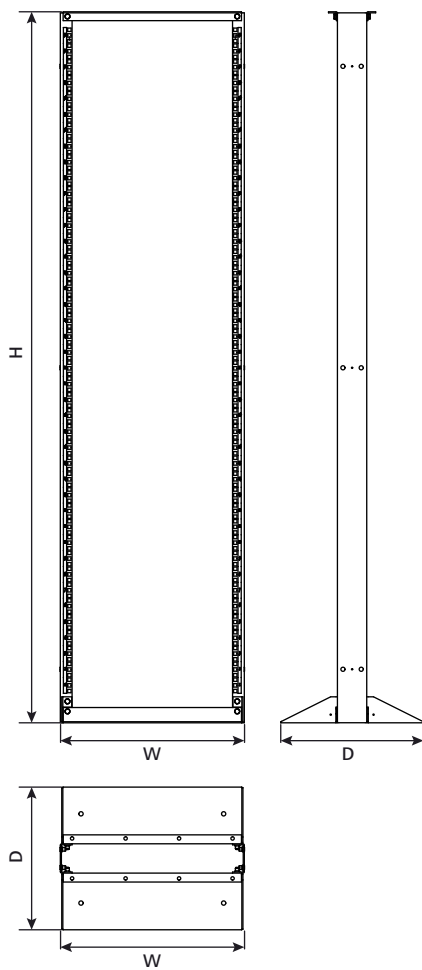

Features and Benefits

- 2 post 19 Inch 45U Patching Frame
- Wide foot plate for added stability
- Vertical cable management available in 300mm and 150mm width options
- Multiple pass through and cable fixing points
- Detachable, dual hinged doors cover patching area
- Separate end panel available for finishing of end of row lines
- Supports UTP and FTP C6A, C6, C5e copper and fibre cabling
