

GST Modular Patch Panel

HellermannTyton have now added an additional panel to the GST range. The European style GST panel is a flat 19" 1U 24 port panel that accommodates up to 24 GST jacks.

The panel accepts Category 6A, Category 6 and Category 5e GST jacks, which can be securely loaded from the rear of the panel. With built in rear cable management, each cable has its own fixing point to help secure the cable and protect the terminations.

The panel provides dual magnified labelling fields enabling clear port identification. The panel is supplied with standard blank and numbered (1-24) labels. There is also the option to use HellermannTyton's Alphalabel software to create installation/network specific labels from www.htdata.co.uk

Using the range of coloured GST jacks, it is possible to achieve network segregation with each colour jack being clearly visible on the front presentation of the patch panel, making port identification and patching easier and quicker.

Loaded GST Modular Patch Panel

Features and Benefits

- Accommodates 24 Category 6A, Category 6 or Category 5e GST Jacks
- Built-in rear cable management fixing points
- Dual magnified labelling fields for clear port identification
- Rack Snap, Cage Nut and Screw fixing options available
