

Closure with Multi-Ribbon Fibre Trays

Multi-Ribbon Fibre Tray

HellermannTyton have introduced the Multi-Ribbon fibre tray to the Broadband Systems product range.

The ribbon tray is a double height fibre splice tray which supports the easy routing, protection, storage and splicing of up to 12 x 12 ribbonised fibre cables. It can also accommodate up to 36 heatshrink (3A) single fibre splice protectors. The ribbon tray is compatible with the FDN and UFC tubed closures.

The open and spacious design means the tray is easy to work with whilst routing features and retaining tabs maintain a positive minimum fibre bend radius of 30mm throughout. The trays are manufactured from ABS and finished to a high specification with radiused edges and rounded corners to eliminate the risk of snagging or micro-bending of the fibres.

The ribbon fibres are secured and routed onto the trays using HellermannTyton's unique Tubefix system. Neoprene foam inserts maintain the vertical orientation of the ribbon fibre and manage the fibre into the splice area. All trays include a clear cover to ensure the fibres are retained on the tray.

Features and Benefits

- Up to 12 x 12 fibre ribbons in a single tray
- Up to 36 x 3A-style splice protectors in a single tray
- Supports up to eight ribbon or tube Tubefix connectors
- Open format tray for easy fibre routing
- Positive fibre management to prevent fibre micro-bending
- For use with FDN and UFC fibre closures
