

1U RapidNet Angled Panel

## Short Body RapidNet Cassette

The Short Body RapidNet cassette has been designed to be used with the angled RapidNet panel. The angled RapidNet panel offers a high density solution, removing the need for horizontal patch cord management and increasing capacity within the rack or frame by up to 50% when compared to traditional patch management methods. The angled panel also reduces the bend radius for both front patch cords and rear permanent link cables.

The new Short Body RapidNet cassette is available in Category 6A, Category 6 and Category 5e, providing 6 RJ45 ports per cassette or 24 ports in 1U of rack space.

The ports are available in a choice of 5\* colours as standard which can help define network features such as routes, services, hierarchies or security levels. The colours can also be used to identify connections within a shared space such as in a co-location data centre.

The angled panel is available in both 1U and 2U options. A range of accessories completes the angled panel solution including rear cable management and 2 types of cover, designed to maintain consistent airflow within a cabinet or rack.

Short Body RapidNet in Green

### Features and Benefits

- Designed for the Angled RapidNet Panel
- Category 6A UTP - 10G Performance, also available in Category 6 and Category 5e
- World leading pre-terminated system
- Reduces installation time by up to 85%
- 5\* coloured jack option for network segregation
- Pre-tested with test results supplied
- Second end options available

\*HellermannTyton can offer a further 7 colour options depending on your requirements. Please talk to our sales team for further information.
